

BLOOD-BORNE VIRUSES (Hepatitis & HIV) POLICY

Rationale

- Schools must:
 - protect the privacy of students who have a BBV
 - avoid any form of discrimination of students with a BBV
 - provide BBV prevention education as part of the health education program in line with the Victorian Curriculum.
- The Department of Health & Human Services advises as long as basic hygiene, safety, infection prevention and control and first aid procedures are followed:
 - risks of contracting blood born viruses are negligible
 - staff have a duty to provide first aid to students or other staff with a BBV in the classroom, physical education and sports settings and on school grounds

Purpose

- To outline how Tarneit Rise Primary School will deal with blood-borne viruses (BBV). BBV's include Hepatitis B and C and Human Immunodeficiency Virus (HIV).
- To ensure the school complies with DET policy and guidelines and the legislative requirements of the
 - Equal Opportunity Act 1995
 - Equal Opportunity (Gender Identity and Sexual Orientation) Act 2000

Definition

Hepatitis is a term that describes inflammation of the liver. It may be caused by viruses, alcohol, drugs and other toxins, or less commonly by a breakdown in a person's immune system. Inflammation is a natural reaction of the body to injury and often causes swelling and tenderness.

Implementation

- The BBV status of a student is a private matter between a student and his/her family doctor.
- When parents/carers report the BBV status to the Principal, the Principal will respect the student's confidentiality and keep the information from being accessible from others without parent/carer consent and/or student consent, if appropriate.
Note: the above privacy principles also apply to school staff.
- In accordance with the requirements of the above Acts, the school will protect students from victimisation or discrimination based on BBV infection. Examples of discrimination include:
 - refusing to enrol the student
 - excluding the student from attendance
 - denying access to school programs or activities
 - failing to protect the student from harassment or victimisation
 - breaching confidentiality related to the BBV status
 - differential application of school rules
- The school will consult with the Communicable Disease Prevention and Control Unit within the Department of Health with questions or concerns about disclosure or exclusion
See: Communicable Disease Prevention and Control Unit
- The Principal will refer also to DET's publication Guidelines for Hepatitis 2013.
- Please refer also to the school's First Aid Policy, the Duty of Care Policy, Bleeding Students/Blood Spills Policy, Bullying & Harassment Policy and the Information Privacy Policy.

Evaluation

- This policy will be reviewed as part of the school's three-year review cycle or if guidelines change (latest DET updates early & late July 2017).
